ESC Remote Hosting Service

Do you feel that it is a never-ending challenge to continually update your applications in order to remain in regulatory compliance for reporting? Are there delays in implementing updates during busy reporting months? Do you wish that someone else could just take care of your hardware and software administration, leaving you to focus on your data?

Maintaining your DAS server has become even more challenging with rapidly occurring software and hardware updates mandated by EPA. What if ESC could take care of all of those responsibilities for you? Let us remove the burdens associated with maintaining your applications by using the ESC Remote Hosting Service. ESC will manage your ESC|StackVision and/or ESC|FleetVision application and database through a Data Center and will take care of all server maintenance activities.

Remote Hosting Service Includes:

- Hardware Upgrades and Replacements
- Database Backups and Storage
- Database Maintenance
- Operating System Upgrades and Updates
- SQL Upgrades and Updates
- ESC|StackVision Updates
- ESC|StackVision Client Updates
- ESC|FleetVision Updates

Taking advantage of the Remote Hosting Service allows you to **focus on your environmental responsibilities** while resting assured that your data is maintained, stored in a secure location and updated expediently so you can remain in compliance.

For more information on how the ESC Remote Hosting Service could help your organization, contact your Senior Account Executive today!
